

## E-cigarette and THC Vaping Research Study

Dr. Darquenne and Associates in the Section of Physiology at UC San Diego are conducting a research study to better understand how e-cigarette and THC vaping affects normal lung function. Participation in this study involves doing some lung function tests, filling out questionnaires and having blood and urine sample taken. You do not have to vape to participate.

We are looking for men and women who are:

- Between the ages of 16 and 35 years
- E-cigarette-only vapers **or** THC-only vapers **or** dual E-cigarette/THC vapers **or** persons that do not vape or smoke.
- You must not have any current lung or heart disease.

The study consists of one single visit in the Human Laboratory of the Section of Physiology at the Medical Teaching Facility on the UCSD campus and is about 2 hours in duration.

Participants will receive \$50 for completing the study.

If you are interested in participating in this study or would like more information you can Sean Swenson at 619-471-0823 or [DarquenneLab@gmail.com](mailto:DarquenneLab@gmail.com).
